Assignment -2

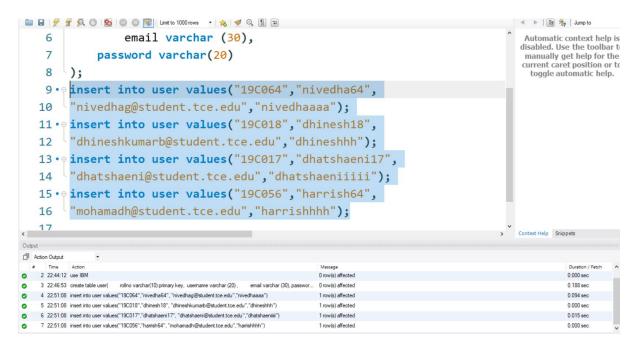

Assignment Date	29 September 2022
Student Name	Dhatshaeni E
Student Roll Number	917719C017
Maximum Marks	Marks

1. Create User table with user with email, username, roll number, password.

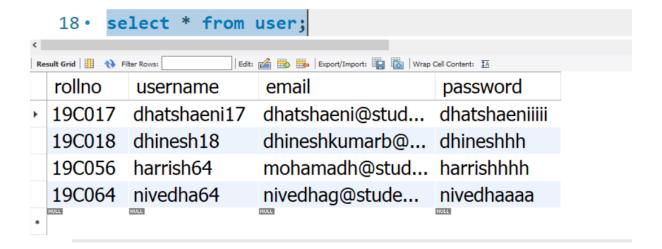

User table:

```
□ □ □ | \( \frac{\psi}{\psi} \) \( \frac{\psi}{\Q} \) \( \frac{\Q}{\Q} \) \( \frac
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 · create database IBM;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Automatic context help is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            disabled. Use the toolbar to
                         2 · use IBM;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              manually get help for the
current caret position or to
toggle automatic help.
                         3 · ○ create table user(
                                                                                                              rollno varchar(10) primary key,

```

Inserting values into user table:

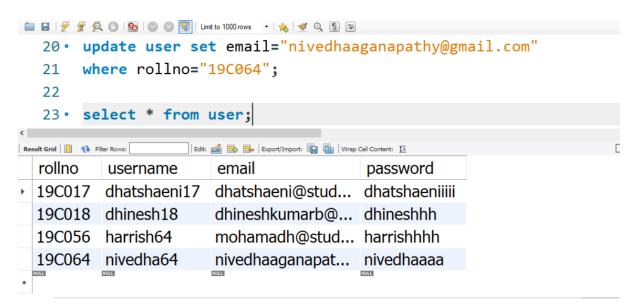

User table:

2. Perform UPDATE, DELETE Queries with user table.

Update query and resultant table:

Delete query and resultant table:

We have combined part 3 and 4:

- 3. Connect python code to db2.
- 4. Create a flask app with registration page, login page and welcome page. By default, load the registration page once the user enters all the fields store the data in database and navigate to login page authenticate user username and password. If the user is valid show the welcome page.

App.py:

```
from flask import Flask, render_template, flash, request, redirect, url_for,
session
import sqlite3
app = Flask(\underline{\quad name}\underline{\quad})
app.secret_key="123"
con=sqlite3.connect("database.db")
con.execute("create table if not exists users(pid integer primary key,name
TEXT, email TEXT, contact TEXT, password TEXT)")
con.close()
@app.route('/')
def home():
 return render_template('home.html')
@app.route('/profile')
def profile():
 return render template('profile.html')
